Creative Vision, Delivering Results

ESGC's creative vision enables us to excel in crafting targeted, powerful solutions to meet our client's business challenges. Our team of people delivers measurable value from a full range of innovative, industrialized technology solutions.

Protect Your Digital Investment.

ESGC provides enterprise solutions transforming our client's Digital Assets, resulting in a high performing organization in the public and private sector.

Strategic IT Planning

The successful companies align their resources and strategies to meet new business opportunities. Whether it is strategic alignment of technology for changing markets or new technology strategy for entry into new markets, ESGC provides the tools, technology depth and breadth of experiences, and foresight to ensure clients' strategic technology objectives align with business goals, core competencies and market needs.

Infrastructure/Network Consulting

ESGC provide experienced and certified engineers and technicians with areas of expertise ranging from Enterprise Architecture Design, to network security and technology implementation. Today's business environments require a high-quality network infrastructure to take advantage of immense data that is available to business user. ESGC offers consultation and expertise on a breadth of networking solutions and products that may benefit your institutions needs:

- Enterprise Architecture Design
- Unified Communications
- Wireless networking
- Onsite Consulting

Staff Augmentation

In today's markets, companies often experience situations where there is more work than can be handled by their staff and additional resources are needed to perform the work required. ESGC offers technical and project management personnel for short and long-term engagements, projects, internal systems administration, and technology delivery. Staff augmentation assistance can reduce your operating costs, which in turn increases your competitive business edge.
